

Ontrack Services

Data recovery

Data recovery is our core service offering. Whether it's data loss from USB sticks, smartphones, hard drives (SSD/HDD) or complex RAID, server or virtual systems, our customised solutions and data recovery experts are the right contact for you and your clients.

Data erasure

Secure data erasure is an important part of IT security for companies as well as private users. With our data erasure solutions, you can be secure in the knowledge that sensitive data will not fall into the wrong hands. Ontrack offers

- On-site erasure services
- Hardware and Software Services
- Data erasure verification service
Is your data erasure method 100% reliable? If you are not sure, send your erased hard drive(s) to Ontrack for verification. Our experts can verify if all data has been securely removed.

Tape Services

Do you have damaged or corrupted tapes in your archive? Or would you simply like to know what data is stored in your tape archives? This and more is no problem for our tape specialists. Thanks to our self-developed tools we can handle large quantities of data and tapes. We can read the data and restore it as necessary.

Email Data Recovery

Ontrack offers services and software solutions for recovery of lost, damaged or accidentally deleted emails, folders or entire email servers.

eDiscovery

Ediscovery services are part of KLDISCOVERY's wider portfolio offering. Our experts have many years of experience in ediscovery. Depending on the project and requirements, our customers decide which review tool they want to work with.

Ontrack Software

Ontrack® PowerControls™

Ontrack PowerControls enables simple search and granular recovery of data from Microsoft® environments: Office 365 Email, Exchange, SharePoint or SQL.

Data erasure

Secure and final data erasure with the professional tools using Blancco software. Software to erase data from all media and via network, including reporting and erasure certifications.

Ontrack® EasyRecovery™

Ontrack EasyRecovery is a comprehensive data recovery software suite for businesses and end users. As long as there is no hardware damage, you can use it to recover all data (e.g. accidentally deleted or formatted data) quickly and easily. But the software can do even more: preventive S.M.A.R.T. analysis of the data carriers and secure deletion of data.
